Description

Belgian Wheat Beer is traditionally considered to be a summer drink. It is usually consumed as an aperitif with a slice of orange or lemon.

Service:

Glass: Pint Beer Chalice

Temperature: 4-8 °C

BREWER`S TIP

For better filtration, add 1-2% Rice hulls.

To promote a good banana aroma, under pitch slightly (0.5g/L), low or no aeration, no head pressure, and ferment at high temperatures (22-26 °C).

To promote clove-like aroma, as WB-06 is a POF+ yeast strain, do the opposite. And to boost it, do a ferulic acid rest in the mashing.

Step 4: Cold Aging and Packaging Cold age the beer at 0°C for 5 days, remove the residual yeast, and carbonate until **3.0 volumes of CO₂**. The beer is ready to package and drink. Enjoy! *For refermentation in the bottle, add brewing sugar and SafAle F-2.
